Registration Number: 25bai10249

Branch: cse(ai/ml)

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

University: VIT Bhopal University

introduction

This project was assigned as part of the Digital Literacy course to help students understand and apply essential digital skills.

As a Student Digital Ambassador, the objective was to create awareness about digital tools,

safe online practices, and professional communication. The project consists of five tasks,

each focusing on a different aspect of digital literacy, including infographic creation, building a digital portfolio, exploring online platforms, email etiquette, and cybercrime awareness.

Through this project, I learned how to effectively use various digital tools and platforms, as well as how to present information in a clear and professional manner.

It also helped me understand the importance of maintaining a responsible digital presence and staying safe online.

task 1

created my digital literacy infographic using Canva, as it is a user-friendly and visually appealing design tool.

The infographic covers key topics such as the meaning of digital literacy, useful tools for students,

safe internet practices, professional online presence, and email etiquette.

I structured the infographic into different sections with clear headings and simple bullet points to make it easy to understand.

I also used icons and colors to enhance the visual appeal and readability.

The goal was to create an informative and engaging resource that could help my peers quickly understand important digital concepts.

One challenge I faced was selecting the right amount of content without overcrowding the design.

It was interesting to learn how visual elements can improve communication. Overall, this task helped me develop both my design skills and my understanding of digital literacy.

task 2

For my digital portfolio, I created accounts on GitHub, LinkedIn, and Kaggle.

These platforms are widely used for professional development and skill building.

On GitHub, I created a profile README to introduce myself and my learning goals.

This platform will help me store and share my projects.

On LinkedIn, I added my education details and created a professional profile that I can use for networking and exploring internship opportunities.

Kaggle is a platform for data science and problem-solving, which I plan to use to improve my analytical skills in the future.

Over the next four years, I aim to actively use GitHub to upload my projects and track my progress.

I will use LinkedIn to connect with professionals and stay updated with industry trends.

Kaggle will help me practice real-world problems.

This task made me realize the importance of building a strong digital presence early in my academic journey.

task 3

In this task, I explored both coding and collaboration platforms.

I used HackerRank to complete a beginner-level coding challenge called “Solve Me First.”

This helped me understand basic programming concepts and improved my problem-solving skills.

For the collaboration part, I created a Digital Literacy Awareness Quiz using Google Forms.

The form includes five questions related to digital literacy, including multiple-choice and short-answer questions.

I also linked the responses to a Google Sheet to collect and analyze data.

These platforms are very useful for academic growth. HackerRank helps in improving coding skills and logical thinking,

while Google Forms is useful for conducting surveys and quizzes efficiently.

This task helped me understand how digital tools can be used for both learning and collaboration.

task 4

Poor digital communication can lead to misunderstandings and negative impressions.

For example, if a student sends an email without a subject line or proper greeting, it may appear unprofessional and disrespectful. This can result in the email being ignored or misunderstood.

Such situations can be avoided by following proper email etiquette, including using a clear subject line,

polite language, and a structured format. Professional communication is very important in academic and professional environments.

This task helped me understand how to write formal emails and communicate effectively.

In the future, I will ensure that my emails are clear, polite, and properly structured to maintain professionalism.

task 5

While researching cybercrime, I was surprised by how common UPI fraud and online scams are.

Many people become victims due to lack of awareness and trust in unknown sources.

Even a small mistake, such as clicking a suspicious link or sharing an OTP, can lead to financial loss.

This task helped me understand the importance of online safety and being cautious while using digital platforms.

I learned that it is important to verify sources and avoid sharing sensitive information.

One habit I will change is that I will never approve unknown payment requests or click on suspicious links.

I will also spread awareness among my friends and family to help them stay safe online.

conclusion

This project was a valuable learning experience that helped me understand the importance of digital literacy in today's world.

I gained practical knowledge about using digital tools, creating a professional online presence, and communicating effectively.

I also learned about online safety and how to avoid cyber threats.

Overall, this project improved my technical and communication skills.

It has prepared me to use digital platforms responsibly and confidently in both academic and professional settings.
